

Final Assignment

- **15 minutes presentation each group** and should include:
 - Problem statement
 - Proposed solution
 - Agentic AI Architecture
 - *MVP Demonstration(Optional) or demo flow
 - Benefits & desired outcomes
 - Next steps/Improvements
- **Dates: 24th June & 1st July**
- For building an MVP you could use Helix or any other software/platform
- **Important:** Send me the Agent(s) prompt and Tool(s) description before your presentation.

*Minimum viable product

Recommendations

- 8-10 slides maximum for the presentation
- Leverage visuals and AI if needed (but think about it)
- Don't prepare everything in the last minute
- Be ready for next session (Mentoring/Clinic) with some content

Rubrik

- **Problem Framing, Agent Goals & Prompt (15 points)**
Evaluate whether agent goals address real user, business, or operational needs with measurable value and prompt quality.
- **Agentic system Architecture (10 points)**
Explain architectural patterns chosen and their alignment with the problem, noting trade-offs.
- **Tools, actions & feasibility (15 points)**
Explain which tools the agent uses and why they are appropriate and realistic. What the agent decides versus what the tools execute. The agent should make decisions; tools should perform actions.
- **Agentic Thinking and Autonomy (25 points)**
Demonstrate agent autonomy through perception, reasoning, action, and explain the flow that would follow using either a real live demo or equivalent.
- **Risk Awareness and Mitigation (15 points)**
Incorporate risk management strategies.
- **Clarity, Presentation Quality & Creativity (20 points)**
